

# TUNNEL VENTILATION

## COOLING SYSTEM

Tunnel ventilation is an air cooling system that designs for livestock houses. It always includes a certain number of fans and a certain square measure of cooling pads, which place on two opposite sides of livestock house. Once the fans start running, the hot air will be sucking from outside of the house and pass through cooling pads into the house, this process can reduce the air system can create a higher quality of living environment, which will reduce temperature from  $3^{\circ}\text{C}$  to  $8^{\circ}\text{C}$  (depends on the environment ). A good increasing the growth rate and decrease the mortality rate.

### AIR FLOW

(PAD) → (FAN)

Tunnel ventilation is suitable for summer season and tropical regions, where the temperature is always higher than  $30^{\circ}\text{C}$ .

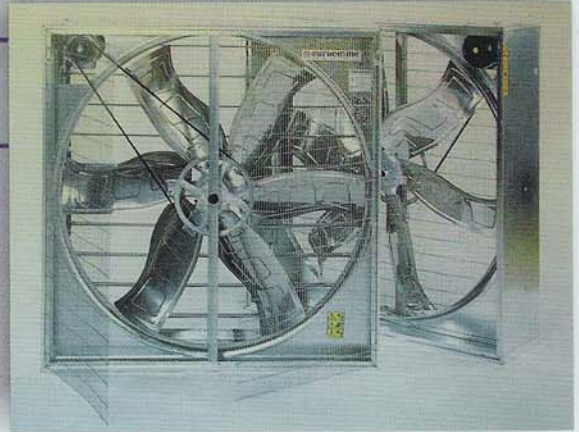

## PRODUCTS & SERVICE

It's always hard to decide what kind of products we shall purchase.

Now, you can just trust ALMINCO because all our products have been strictly tested to give best performance.

### Alminco Fans

They are all tested to give best performance.

### Alminco Cooling Pads

High quality pads can reduce the temperature of livestock buildings efficiently. It's used to give complete climate.

### Alminco Environment Controller

It's used to give complete climate control of all type of livestock buildings.

Capable to use for pig, chicken, bull, and green house. Effectively reduce the ammonia, save your environment.

All the employee of ALMINCO is well training and ready to serve you. By minimum investment, we can design a best living environment that would give maximum profit. We guarantee your satisfaction by our 26 years experience and knowledge.
